- Pethidine
- Morphine
- Diamorphine

- Heroin powder
Black Tar Heroin
Bags of Heroin
Shooting up
Opium-heroin is derived from opium
Peyote & Shrooms
Magic Mushrooms
Kits to grow your own
Dried Mushrooms
A huffer hit by a car
Some Bodily Evidence of Drug Use
Repeated injections may develop permanent slits in the skin.
Skin Rash - common skin condition for addicts who shoot up
These black spots on the brain indicate long-term drug use.
A cross section of the Brain

Hemorrhage caused by a cocaine overdose
Hemorrhage caused by a cocaine overdose
Drug Smuggling

One common way to smuggle drugs into the country is to swallow a plastic bag filled with cocaine, heroin, or some other illegal contraband. After passing through customs, the smuggler will the “throw up” the bag. This plan goes south if the bags burst while in the stomach.
The black spots in this stomach indicate where bags of cocaine burst, causing a massive overdose.
